

```
const { isEmpty } = require('lodash')
const singleUserResolver = (root, args, context) => {
 const { uuid } = args
  const { knex } = context
  return knex('users')
    .where({ uuid })
    .first()
    .then(result => {
      return isEmpty(result)
        ? Promise.reject(new Error('User not found'))
        : result
    })
```

## EXEMPLO DE UM POSSIVEL RESOLVER PARA A QUERY USER

```
const { isEmpty } = require('lodash')
const singleUserResolver = (root, args, context) => {
  const { uuid } = args
  const { knex } = context
  return knex('users')
    .where({ uuid })
    .first()
    .then(result => {
      return isEmpty(result)
        ? Promise.reject(new Error('User not found'))
        : result
    })
```

## EXEMPLO DE UM POSSÍVEL RESOLVER PARA A QUERY USER
